

Mekatronik Software Enters Strategic Partnership with Cloud Security Provider PerfectCloud Corp.

Mekatronik and PerfectCloud today announced a partnership to offer cloud security solutions to the Turkish market. This partnership meets the needs of organizations in Turkey that are looking to ensure the security and privacy of their cloud data.

Toronto, Ontario (PRWEB UK) 26 November 2014 -- Mekatronik Software Ltd. Co., a provider of business management software, streamlined automotive dealership management platforms, and various broadcast solutions for the Turkish market — has joined PerfectCloud Corp., a Canadian unified cloud security solutions provider— in a strategic partnership. Seeing a need for a stronger emphasis on cloud security in Turkish IT infrastructures, Mekatronik will be marketing and distributing both PerfectCloud’s cloud Identity and Access Management solution (SmartSignin) and its storage encryption solution (SmartCryptor) to its customers around the country.

“Cloud technology is a very new phenomenon and a very fast-growing trend in Turkey. Cloud applications need additional security and PerfectCloud will be able to solve and support this problem. Mekatronik distributes a wide range of software applications through its dealer network,” said Dr. Ragip Başbuğ, General Manager and owner of Mekatronik Software Ltd. Co. “With this partnership, Mekatronik will meet the needs of cloud users and gain new insights through its use.”

As Turkish businesses migrate more into cloud-based solutions, they run the risk of suffering a compromise due to unsafe internal practices with their employees. PerfectCloud makes it possible for businesses to easily establish best practices and company policies with regards to the use of cloud applications. It also safeguards passwords in a way that makes them convenient to diversify, as opposed to using a few passwords repetitively across many services.

In lieu of this partnership, Mekatronik will be using PerfectCloud’s software internally.

“PerfectCloud will play an important role in cloud security and Mekatronik aims to be its solution and support center in Turkey,” said Dr. Başbuğ. This partnership will develop and open a new vision of the IT sector for our company.”

"By leveraging our solutions, Turkish businesses will be able to take control of their identities on the web and on the cloud while doing so without any loss of convenience," said Mayukh Gon, founder and CEO of PerfectCloud Corp. "It goes without saying that PerfectCloud provides a crucial service to any business planning to step into the cloud. Our partnership with Mekatronik will expand the reach of PerfectCloud in its aim to provide a means of solid protection to businesses in the Turkish market."
